

JinkoSolar liquid-cooling ESS enables Hangzhou First Applied Material Co., Ltd to upgrade energy storage safety

JinkoSolar's SunGiga has become a new high-growth track and is widely deployed with the C&I market due to its high degree of safety and reliability, combined with cost reduction and increased efficiency.

that of air, and the specific heat capacity is 4 times that of air. It has the characteristics of large heat-carrying capacity, low flow resistance, and high heat exchange efficiency. The air cooling systems can control the temperature difference to 5 ° C, while the conventional liquid cooling system can reduce the temperature difference to 3 ° C, while JinkoSolar's liquid cooling can lower the temperature difference down to 2 ° C. This significantly improves the uniformity of the battery during charging and discharging and is expected to extend the battery life by more than 2 years.

As large-capacity and high-rate energy storage systems become a trend, energy storage safety issues are gradually being paid attention to. Upgrading the energy storage thermal management system is one of the solutions to improve the safety of energy storage systems.

With the rapid development of the domestic energy storage market, domestic energy storage integrators and end-user business customers are accelerating the deployment of energy storage liquid cooling technology, and adapting to the changing needs of the market. As more and more practical application projects are involved, JinkoSolar's liquid cooling ESS solutions are quickly becoming mainstream in the C&I energy storage market.
